

TRIMMING MACHINE **BMV** for vineyards

The SX300 – DX300 range new trimming machine is characterized by a very light, simple and functional structure. It can be applied on every kind of tractors, both small or big ones, so as to be easily fitted, either in height or in width according to the different type of systems. It is endowed with two cylinders for upwards and tilting movements and with a quick enclosure device for the 90° cutting unit ahead rotation which allows a safe road transport. Its weight is 66 kilos and its cutting units come in various models to suit all kinds of requirements. The knives work thanks to a hydraulic engine and to flat belts which needn't a belt tensioner.

The hydro plant needs 16-18 oil litres a minute with a pressure of 80-100 bar.

- 3 hydraulic movements:
 - upwards
 - tilting
 - Top tilting (only for SX300)
- Retractable cutting unit of 90° ahead (LOOK AT THE PICTURE BELOW)
